CONRAD

Grandi foglie di palma in scala macro ricoprono interamente la superficie di questo parato, la cui matericità è enfatizzata dall'uso di rafia naturale su una base in laminato argento.
L'intricata vegetazione è un riferimento alla misteriosa e suggestiva giungla descritta da Joseph Conrad (1857-1924) nel suo celebre romanzo *Cuore di tenebra*.

Wide palm leaves on a macro-scale cover the whole surface of this wallcovering, whose textured effect is emphasized by the use of natural raffia on a silver foil base.
The intricate branches are a reference to the mysterious and evocative jungle described by Joseph Conrad (1857-1924) in his well-known novel Heart of Darkness.
